disability. Call CIHA to schedule a
payment pick up at (541) 888-6501.

Spring Forward

**DAYLIGHT SAVING BEGINS
SUNDAY, MARCH 8TH AT 2:00 A.M.**

THE IMPORTANCE OF WORKING SMOKE DETECTORS

A smoke alarm is critical for the early detection of a fire in your home and could mean the difference between life and death. Fires can occur in a variety of ways and in any room of your home. But no matter where or how, having a smoke alarm is the first key step toward your family's safety. Every year in the United States, about 2,000 people lose their lives in residential fires. In a fire, smoke and deadly gases tend to spread farther and faster than heat. That's one reason why most fire victims die from inhalation of smoke and toxic gases, not from burns. A majority of fatal fires happen when families are asleep because occupants are unaware of the fire until there is not adequate time to escape.

A WORKING SMOKE DETECTOR CAN REDUCE THE RISK OF DYING FROM A FIRE IN YOUR HOME BY ALMOST HALF.

About two-thirds of home fire deaths occur in homes with no smoke alarms or no working smoke alarms. Properly installed and maintained smoke alarms are considered to be one of the best and least expensive means of providing an early warning of a potentially deadly fire.

Prepare

in a
Year

Get 2 Weeks Ready

Prepare to be on your own for two weeks

When a large disaster happens, it may take two weeks for resources to help us. You may be on your own! Coping with the impacts of a disaster is never fun. However, by planning alternative ways to take care of your needs, you can reduce much of the inconvenience and discomfort. Take things one step at a time. You can buy items at discount or dollar stores over multiple trips. Watch for sales over holidays.

QUICK TIP: Being 2 Weeks Ready is as simple as adding one can of food to your cart every time you go grocery shopping to add to your disaster supplies. Don't forget about your pet, too!

Lighting

- Flashlight and extra batteries.
- Camping lanterns: (battery-operated only for inside use. Candles are not recommended and may cause fires).
- Light sticks: These can provide light for 1-12 hours and can be purchased at many department stores.
- Solar lights: Lights that can be recharged using the sun (still works to a degree when cloudy, too).

Shelter

It is common for people to not want to sleep in their homes for a few days following a major earthquake. Having an alternate means of shelter will help you and your family be as comfortable as possible.

- Tent or waterproof tarp.
- Sleeping bags or blankets and pillows.
- Rain gear.
- Emergency/space blankets (compact and easy to store).
- Newspapers or magazines provide insulation from the cold or heat.
- If you have a van, camper or RV, it can be used as your alternate shelter.

Cooking

Never burn charcoal or use camp stoves indoors. This could cause carbon monoxide poisoning.

- Camp stoves, sterno or butane stoves, barbecues – gas or charcoal.
- Fireplaces – After an earthquake, do not use until the chimney and flue have been inspected for cracks. Sparks may escape in to your attic through an undetected crack and start a fire.
- Since a lot of emergency food options are “Just add water/hot water,” use clean or filtered water or boil for appropriate time when cooking.
- Washing dishes won't be easy, but it's still doable. Warm water over a stove. Otherwise, use disposable utensils, cups and plates.

Protecting food when the power goes out

- Keep refrigerator and freezer doors closed as much as possible. A full refrigerator will maintain safe temperatures for up to 6 hours.
- A full freezer will maintain safe temperatures for one or two days; a half-full freezer one day.
- Discard at-risk refrigerated foods that are warmer than 40 degrees Fahrenheit. If in doubt, THROW IT OUT.
- If you think the power will be out for several days, try to find some ice to pack inside the refrigerator and freezer.
- Remember to keep your raw foods separate from your ready-to-eat foods.

South Coast Clambake Music Festival
